

FOR IMMEDIATE RELEASE

BOOZ ALLEN HAMILTON JOINS COGITO PARTNER PROGRAM

Partnership enables government agencies to improve intelligence and security with Relationship Analytics

WASHINGTON (GovSec Expo & Conference 2006)—March 26, 2006—Cogito, Inc. today announced Booz Allen Hamilton, one of the largest government systems integrators, has joined the Cogito Solution Provider Program. This technology and marketing partnership expands the reach of the Cogito Knowledge Center across all aspects of government—from civilian agencies to national security—to provide them with more effective tools for relationship analytics and predictive modeling.

In early demonstrations of the Cogito Knowledge Center, Booz Allen has noted a strong interest in graph-based analytics. They are also finding many different applications for the technology in information assurance (IA), program management, customer relationship management (CRM), and military logistics.

“Booz Allen Hamilton is a key partner for Cogito as we target our solutions through world-wide solutions integrators to the government and intelligence communities,” said David Vangieson, Cogito Vice President of Sales. “Together, we can help multiple industries, including national government departments and security centers discover non-obvious relationships between people, events and/or select activities to provide actionable intelligence and better ensure national security.”

Booz Allen has completed training on the Cogito Knowledge Center and is adding extensions to integrate with existing systems, particularly in the areas of defense, homeland security and civilian agencies. Cogito and Booz Allen have also agreed on co-marketing initiatives to develop white papers and marketing strategies for specific government markets.

The Cogito Knowledge Center is a Graph-Based Relationship Analytics tool that allows organizations to quickly query and view large data sets and identify n-degree relationships and pattern matching to improve data analysis, situation intelligence and process understanding.

The Cogito Solution Provider Program certifies and provides products and resources to Solution Providers and Independent Software Vendors (ISVs) who need to conduct social networking analysis, pattern discovery and relationship analytics in large amounts of complex security data. For more information please visit <http://www.cogitoinc.com> or contact Cogito at 801-858-1000.

About Cogito

Cogito's Graph-Based Relationship Analytics products allow organizations to leverage their existing data structures and applications and identify previously unknown links and sub groups buried deep in generations of structured and unstructured data. Cogito's Knowledge Center provides a robust framework of application services that allow businesses to improve their data analytics and decision-making capabilities by overcoming the limitations of SQL and relational database technology. The Cogito Knowledge Center allows a dynamic schema that can be updated, changed or reorganized at a moment's notice to reflect an ever-changing business environment.
