

FOR IMMEDIATE RELEASE

COGITO KNOWLEDGE CENTER V2 ENTERS BETA

SALT LAKE CITY—Aug. 4, 2005—Version two of the Cogito Knowledge Center (CKC v2) has entered Beta and is currently being run through the paces at several customer sites.

The v2 release is scheduled for general availability early November and includes a number exciting enhancements including full support of a Service Oriented Architecture, new visual query capability and the Windows based user interface.

Watch for more information on the release of version 2 shortly and if you are interested in early access through the beta program please let us know by responding to beta@cogitoinc.com

About Cogito

Cogito's Relationship Analytics products allow organizations to leverage their existing data structures and applications and identify previously unknown links and sub groups buried deep in generations of structured and unstructured data. Cogito's Knowledge Center provides a robust framework of application services that allow businesses to improve their data analytics and decision-making capabilities by overcoming the limitations of SQL and relational database technology. The Cogito Knowledge Center allows a dynamic schema that can be updated, changed or reorganized at a moment's notice to reflect an ever-changing business environment.
